

Major Midwestern health care system standardizes analytics, **improves physician productivity by 30%**

Business issue

Lack of standardization made it difficult to consolidate, aggregate and monitor data across multiple physician groups

Problem

High number of acquisitions resulted in **60+ different billing systems**

Lack of consistency made it difficult to compare performance

Consolidating data across disparate billing systems was daunting

Difficult if not impossible to make apples-to-apples comparisons on physician group performance

Solution

Consolidate and aggregate data into a standard analytics package to provide a consistent view, creating a standard business intelligence tool across unique practices to:

Drive performance improvement

Conduct monthly leadership discussions

Influence compensation

Improve coding compliance and contract reviews

Value

15% reduction in loss per physician

Improved provider efficiency and alignment with contracted hours

30% improvement in productivity (RVUs)

Increased revenue capture due to coding and documentation compliance improvements and reduced charge lag

20% improvement in schedule density

OVERVIEW

Major Midwestern health system

200+ hospitals and continuing care locations serving over 30 million people

WHAT OUR CLIENT SAYS

“The responsiveness of the nThrive team was a key factor in pulling together disparate data sources across the hospitals. This and the timeliness of data have helped us make decisions faster.”
